NOTE: Each manufacturing batch of LEDs is subject to minute variation in colour temperature. The colour temperatures listed are for guidance and show the average to which batches are produced. Where more than one LED is used within the same unit, the LEDs will always be from the same batch for consistency. However, where more than one unit is specified for a project, it is essential to indicate such at time of order to ensure all LEDs across the units come from the same batch. If lamps are ordered on separate dates, we cannot guarantee that the LED colour temperature will match across the lamps ordered.
