BULB TYPE

G9 Eco Halogen bulb
Maximum 18 watt

BULB QUANTITY

3x bulbs per lamp

INTERNATIONAL VOLTAGE ADVICE

Energy supply varies in different regions of the world; some regions have a consistent energy supply, while others can experience fluctuations due to a less reliable supply. Fluctuations in supply can lead to bulb failure.

To prevent bulb failure, we recommend the following:

- 1) Use only premium brand bulbs such as Philips.
- 2) Never touch the halogen bulb with bare hands, as per standard handling advice.
- 3) Use a dimmer switch to keep the lighting down to just below full power, or alternatively, use G9 Halogen bulbs that have a lower wattage than the recommended 18.
- 4) Do not keep the light on for more than 15 consecutive hours.

If you experience bulb failure and must replace a bulb, always ensure that all three bulbs in the lamp are the same brand and wattage. NEVER MIX BULB BRANDS OR WATTAGES.
